## WU PRO SERIES 1.9MM & 2.5MM

**BETHLEHEM, PA** - This project showcases innovative Taylorleds WU 1.9mm curved walls within the "Classroom in the Round" at the Business Innovation Building. Each of the four segments displays stunning visuals at 1,920 x 540 pixels, creating an immersive full-circle experience designed to foster collaboration and engagement.

This state-of-the-art installation extends to the classrooms, featuring WU 2.5mm video walls tailored to accommodate both small and large learning environments. In smaller classrooms, five screens each span 1,920 x 540 pixels, while larger spaces feature seven screens at 2,400 x 675 pixels. These direct-view LED video walls, akin to stadium scoreboards, offer bright, high-resolution images without the need for dimming lights or drawing shades, enhancing the learning experience in this architecturally striking building with its extensive glass facades. This project wouldn't be possible without our collaboration with NV5, the design consultants and Diversified, the project integrator.
